

NOTES:

1. Stands are usually employed with ground floor units where there is no condensate drain system under the floor.
2. Standard height stands raise the unit cabinet 6 inches. Other stand heights are available. The maximum height for this style of stand is 10 inches. Due to the limiting floor-to-ceiling dimension, units with stands may require shorter than standard cabinets.
3. The stand is normally concealed by wallboard.
4. The bottom of the unit is covered with a closed cell insulation and unless otherwise noted, stands are spot welded to bottom of pan and are not removable.
